NEW PRODUCT

“Works Better”

The thixotropic blue gel stays in place and will not run onto exposed tissue. This allows for more accurate placement on the enamel and dentin.

“Lasts Longer”

Can be used on many surfaces like dentin, enamel, and glass ionomer cement. Provides a clean, "rough" surface to work with.

“Costs Less”

Strong, fast acting material at an economical price. Compare to other materials, even at lower percentages.

Etch Gel 38%

This 38% phosphoric acid, multi-purpose gel is excellent for etching dentin and tooth enamel. Great for use prior to bonding, cementation or other cosmetic procedures. The vibrant blue color is easily distinguished from the tooth surface for complete confirmation of application and rinsing. The pre-bent tips provide the perfect delivery method and allow for precise placement.

Packaging:	Item No:	Compares to:
2-2ml Syringe Etchant Gel, 20 Blue Metal Pre-Bent Tips	#PF-2000	Best Etch™, Vista™, Etch-Rite™ & Etching Gel
